Item Code	Helix Dual Voltage Battery Packs	List Price (GBP)
	Helix is the most complete on-board battery system ever offered to the cinematic industry. The system encompasses all the features of Hypercore, with the added function of dual 14V/28V* simultaneous voltage output, answering the call for better designed and performing, on-board high voltage solutions. Leveraging a proprietary, patent pending technology, Helix is ultra efficient, providing nearly lossless power transmission at a 99% efficiency rate to high voltage operating equipment. Helix's unique design allows it to output up to 33.6v, within the top range of high voltage acceptance, thus drawing less current, creating less heat and extending both operational runtime and product longevity.
