

# AV SOLUTIONS | HOUSES OF WORSHIP

Video & Streaming for churches, mosques, temples, synagogues and other places of worship

## THE CHALLENGE

Places of worship use video to build relationships with congregations and to reach out to the wider community. Many live stream services to YouTube Live and Facebook to engage with people who are unable to attend and to share their message widely.

Houses of worship want to deliver a high-quality production, but are concerned about their volunteers' limited experience. So they need production equipment that can be operated with minimal training. This is where we can help.

For major ceremonies and festivals, they might hire an events company with professional cameras. They may need a new in-house production system to be able to easily integrate with these camera feeds, reducing the need for bringing in large amounts of external equipment each time.

In addition to the streaming, in-house systems may well deliver live video to screens around the venue.

## THE SOLUTION

The best solution is to use professional video equipment that can produce results good enough for broadcast television. However, the products we recommend are exceptionally easy to use...

A video mixer to switch your camera angle, select PowerPoint or recorded video

Cameras to zoom in on the stage, pulpit or musicians

Stream video live to the Internet

Switch, record and stream at the touch of a finger

Shoot videos to record ceremonies and share your vision

All-in-one production, recording and streaming systems

## THE WORKFLOW

## THE INSTALLATION

Holdan has helped specify video projects from parish churches to regional worship centres to provide high-quality, reliable video production.

We understand what you need to work in challenging lighting conditions, in listed buildings and in a short time frame to deliver the results houses of worship need.

Most of the systems we specify can be upgraded to accept more cameras, stream to more online channels and give even more professional results.

## THE OUTCOME

In our experience, high quality video production has two real benefits. Firstly, the place of worship is instantly enhanced, with congregations able to follow the service or ceremony on the same screens which are already used for video playback, hymn lyrics and other announcements.

Secondly, audiences local and global can watch services live or on-demand at their leisure. This is great for outreach projects and evangelism, to build relationships locally and globally.
