

CREATIVITY WITHOUT COMPROMISE

Shoot with wider apertures and slower shutter speeds

SLR Magic's Variable ND filters give you precise control for the darkening of the entire shot from 1.3 to 6 stops. They're an indispensable tool for creative control.

Fully calibrated, they feature unique locked start and end stops points, eliminating over rotation and unwanted artefacts. They feature 12 marked reference points, more fluid motion, and a rotation lever so they're easy to use giving confidence and control to the operator.

Using the highest quality optical glass for ultimate clarity and colour fidelity, SLR Magic filters are multicoated to prevent internal ghosting and reflections. They are also designed to prevent vignetting even with wide-angle lenses.

FEATURES AND SPECIFICATIONS

- 1.3 to 6 Stops of light control
- Calibrated rotating ring with start and end stops
- Minimal colour shift and improved sharpness
- Larger front filter ring to avoid vignetting
- Adjustable filter orientation
- Protective case and front lens cap
