

# TERADEK RT

## PRECISION WIRELESS LENS CONTROL

### CTRL.1 Single-Axis Wireless Lens Controller

CTRL.1 hand unit is a high calibre, single-axis wireless controller with built-in lens mapping and data storage, saving calibration time between lens changes. Paired with compatible SmallHD monitors CTRL.1 can overlay lens focal distance on the monitor, creating the world's first all-in-one wireless video & lens control solution.

### MOTR.X Superspeed Lens Motor w/ Loophrough

MOTR.X operates with lightning-fast speed and incredible torque while remaining totally silent. The motor has 6x the service life of brushed motors. It includes a quick-release rod-mount and a rapid tool-less gear swap mechanism. Additionally, new in/out motor ports pass data and power, allowing MOTR.X units to be daisy-chained from one motor to the next and reduce cable clutter on your rig.

### TERADEK RT KITS Everything You Need
