WEEBILL S

Professional 3-Axis Stabilizer

WEEBILL-S easily handles mainstream DSLR cameras. Thanks to its compact size, lightweight body and unique Sling mode, WEEBILL-S delivers an effortless shooting experience even with the new generation of full frame mirrorless cameras.

Featuring an upgraded algorithm and more powerful motors, an intelligent ViaTouch 2.0 system as well as an ultra-low latency HD image transmission module, WEEBILL-S pushes the limit of filmmaking even further.

Unleash boundless possibilities with WEEBILL-S!

TINY GIANT

FEATURES

Supreme Power. Superior Compatibility

WEEBILL-S comes with the newest motor unit and upgraded algorithm, with 300% improvement in motor torque and 50% increase in responsiveness. With better power comes stronger compatibility, WEEBILL-S can easily handle mainstream mirrorless and DSLR camera & lens combos.

Compact as a Piece of A4 Paper

The unique structure and minimum design of WEEBILL-S make it super compact as a piece of A4 paper. With the ergonomically designed Sling mode, WEEBILL-S provides an effortless shooting experience for anyone.

Upgraded Image Transmission Module: Step into Stride

The all-new TransMount Image Transmission Module (accessory), in its compact size, can be directly mounted under the quick release plate neatly. With 1080P 30fps highly synchronised transmission (100-meter distance) featuring LUT, Pseudocolor, Focus peaking, Zebra Stripes etc, professional monitoring and livestreaming can be easily achieved on a gimbal.

Intelligent Auto Tune

WEEBILL-S has a new self-adaptive control algorithm, which can automatically recognize the product weight in an ultra-accurate way. Simply mount your camera onto WEEBILL-S to auto-tune its motors to best adapt to your device.

Stay Focused All the Way

WEEBILL-S supports both electronic focus control and mechanical focus/zoom control through a handy control wheel. Whatever camera & lens combo you're using, you can always pull focus or zoom precisely via the included cable and servo motor.

Set-up and Pack-up at Ease

WEEBILL-S uses a two-in-one quick release plate (Manfrotto/Arca-Swiss), allowing easy set-up and fast transition between cameras without re-balancing. With its upgraded latch design, each axis can be easily locked for fast balance adjustment and safe storage.

Modular Design

Use a pro-monitor with the TransMount Image Transmission Package for indoor and outdoor shooting. Up-to 3 devices can be connected for real-time monitoring. The new Wireless Remote Controller with built-in motion sensor gives you and your crew, stabilizer and camera control even over long distances.

Responsive and Flexible than ever

The upgraded 8th generation *Instune* algorithm provides high responsiveness and eliminates jitter in fast movement. Not only that, you can quickly adjust the speed and various parameters of each axis directly through the dial on the handle, giving you responsive and flexible control.

ViaTouch 2.0: Your Finger-Touch Vision World

ViaTouch 2.0 seamlessly connects your smartphone, camera and gimbal. Various gimbal and camera parameters can be adjusted in real time. SmartFollow and Sync Motion give you unprecedented instant control over your camera.

CONTROL MODE

PAN FOLLOWING MODE

The roll axis and tilt axis are locked. The camera pans as you turn the gimbal left and right.

FOLLOWING MODE

The roll axis is locked so the camera pans and tilts to follow the handle movements.

LOCKING MODE

All three axis are locked so the camera is fixed in one position.

VORTEX MODE

Vortex Mode gives you the freedom to make 360° barrel shots in all dimensions.

FULL-RANGE POV MODE

Full-Range POV Mode allows 360° synchronous movement on all three axes, offering an immersive experience like never before.

ZHIYUN APP

ZY Play

ZY Play is a powerful assistant app dedicated for Zhiyun stabilizer users. With it, you benefit from remote camera control and easy access to gimbal settings.

Lightcollector

Within the app, you will find the world's biggest video sharing community for stabilizer lovers - Lightcollector, with detailed stabilizer tutorials and amazing footage created and shared by users worldwide.

SMOOTH-Q2 Specs

Operation Voltage	3.6 V
Output Voltage	5 V
Operation Temperature	-10°C -45°C
Operation Time	17 h
Weight	380 g
Payload	260 g
