

RECORD, STREAM & SHARE - LIVE & ON-DEMAND

Introducing AW-UE4 Wide Angle 4K PTZ Camera with IP Streaming

Video, within, across and beyond your organisation

From universities and schools to law courts and houses of worship, from corporate companies and training bodies to charities, hospitals and police forces, video is now a daily part of life.

It's pivotal in recording proceedings and archiving events, sharing training and linking remote audiences live.

With today's production workflows, users can capture great-looking video that viewers actively want to watch, and that faithfully record events in real-time.

Multi-camera, TV quality production is now within reach of everyone, along with the ability to share video live and on-demand, with global, selective or pay per view audiences.

Panasonic's AW-UE4 camera is a next-generation device that fits numerous workflows & delivers fantastic results.

Easy to install, easy to use

Some of the key benefits for the UE4 include:

Multi-format support - UHD and Full-HD video capture over HDMI or IP

Pan-and-scan functionality - users can move around the image despite the camera being static, storing up to 100 preset movements

Webcam function - plug in USB to use as professional quality webcam for Skype, Webex and other video-conference applications

Live-streaming - RTSP and RTMP support for YouTube and Facebook Live over Ethernet

Built in Microphones - no need for external audio

Flexible mounting options - Comes with ceiling or desk mount

Single-cable solution - video and audio, control and power can be provided over CAT5 (supports PoE)

WORKFLOWS

Recording & encoding on-demand video | Lecture Capture & Corporate Production

Panasonic's UE4 is discreet and easy to place on desks, mounted to the ceiling or positioned on tripods. Its ultra-Wide angle lens is suitable for the biggest stages and the smallest huddle rooms.

As a fixed installation or portable device, it's able to capture very high quality wide shots in 4K and close-up, panning and zooms shots in HD.

Use two or more UE4 cameras with Epiphan's Pearl Mini to switch between different angles and mix in computer-based presentations or training materials.

Upload the resulting recordings to CMS systems such as Panopto, Kaltura and Wowza to be shared with staff, students, customers and other stakeholders.

Recording and Streaming Live | Conferences, Sport, Arts & Culture

Watching events live on the Internet is now a minimum expectation, not just for millennials, but for employees, employers and consumers worldwide. Until recently, producing and delivering television-standard pictures live required broadcast facilities. Now it's within the reach of thousands of organisations.

Using multiple Panasonic UE4 cameras in conjunction with Telestream's Wirecast software, a single operator can produce fantastic video, complete with live graphics, panning shots, wide angles and close-ups. With a single click, the live video can be recorded, live streamed and shared with audiences worldwide.

It's easy to learn and can deliver superb results that will transform the way you communicate.
