Why the YAGH?

The YAGH takes the GH4 to the next level. It is the bridge that turns a DSLR / DSLM-type camera into a truly professional 4K system.

Pro-Audio

Now there's no need for an external audio recorder.

YAGH's balanced inputs, quality pre-amps and phantom power means that users can simply plug in professional XLR mics and line audio.

10-bit Video Capture

You're no longer restricted to 8-bit video which lacks subtlety in graduated colours, copes poorly with shadows and highlights and is difficult to grade in post.

10-bit capture lifts the GH4 above any other camera in its class.

Timecode

Now the GH4 can be integrated into a studio, synchronized via professional timecode.

Pro Cables

With YAGH you avoid micro HDMI, a notoriously weak port.

SDI is far more robust and supports significantly longer cable runs.

Side view

- HDMI output

- Audio level meters
- Independent audio controls
- Audio mode selector

- Quad SDI ports
- Timecode in
- DC in
- 48V dual XLR inputs

Buy the GH4/YAGH bundle and enjoy considerable savings
