

TERADEK RT

PRECISION WIRELESS LENS CONTROL

CTRL.3 Three-Axis Wireless Lens Controller

CTRL.3 is a feature-rich, powerful 3-axis wireless controller with built-in lens mapping and data storage. Paired with any SmallHD monitor running OS3, CTRL.3 displays critical lens data as overlays directly on the monitor, allowing camera assistants to pull focus and keep eyes on the image.

MOTR.X Superspeed Lens Motor w/ Loophrough

MOTR.X operates with lightning-fast speed and incredible torque while remaining totally silent. The motor has 6x the service life of brushed motors. It includes a quick-release rod-mount and a rapid tool-less gear swap mechanism. Additionally, new in/out motor ports pass data and power, allowing MOTR.X units to be daisy-chained from one motor to the next and reduce cable clutter on your rig.

TERADEK RT CTRL.3 KITS Everything You Need

Hit the ground running with production-ready Teradek RT lens control kits. These attractively priced one and three-axis kits come fully equipped with a hand controller, lens motor, receiver and all the accessories you need to get started.
