

# VidiU Go

PROFESSIONAL LIVE STREAMING

Usually, streaming is only easy if you have a strong, reliable connection to the Internet. With VidiU Go, you can stream reliably from virtually anywhere!

## Multiple Connections

Not only can VidiU Go use wired, WIFI, or cellular networks, it constantly monitors and prioritises the best network to ensure that your video stays live. VidiU Go can even combine multiple connections (and connect to multiple smartphones) to give you the best possible streaming experience.

## Exceptional Cellular Connectivity

Although you can connect third party 3G/4G/LTE USB dongles, Teradek's Node Modems feature professional high gain antennae for better performance and stability.

## HD Streaming over Lower Bandwidths

VidiU Go uses next generation H.265 (HEVC) encoding. This allows the unit to stream high quality HD (up-to 1080 60p) at half the bitrate used by H.264. That means that you can stream great looking, stable pictures even when you have a relatively poor signal.

## VIDIU GO FEATURES

	VidiU Go (SDI+HDMI)	VidiU Go (HDMI)
Video	1080P60	
Compression	HEVC / AVC	
Max Bitrate	30 Mbps	
Cloud	Core / Sharelink
